E.Protect+ Shoring is a redundant field-installed composite waterproofing, methane gas, and vapor intrusion barrier for below-grade pre-applied vertical wall protection. Designed to provide the most redundant and highest level of below grade building protection of the E.Series systems, E.Protect+ provides unparalleled protection by creating a fully bonded system utilizing multiple types of waterproofing. E.Protect+ Shoring is the first system ever developed to combine in one system, what others might utilize as three completely independent systems. E.Protect+ Shoring is designed for those who require the highest level of performance.

E.Protect+ Shoring is compatible with cast-in-place poured concrete or shotcrete, and when applied to different types of shoring methods including soldier pile, back lagging, shotcrete soil nail, internal rakers, caissons, secant walls, and sheet piles.

### Description

- Chemically Resistant. Provides a high level chemical resistance to a wide range contaminants commonly found in soil and groundwater.
- Redundant: Three layers of different waterproofing materials create a composite system that is superior to the materials used on their own.
- Seamless. Composite field-installed membranes do not contain a continuous seam.
- Fully Bonded: The system mechanically bonds to any concrete overlay, including shotcrete.
- Fast Installation: Less weather sensitivity compared to comparable competitive systems, and does not require additional protection prior to the placement of concrete.
- Continuous Active Protection: The bentonite layer creates a uniform self-sealing membrane.

### Benefits

- Sites with brackish water and/or contamination will require compatibility testing to determine the appropriate use of bentonite.
- Extreme weather conditions can impact installation methodology.

### Limitations

- System: E.Protect+
- Former System Name: System III-LWBH
- Application: Shoring
- System Thickness: 196 mils

WARRANTY

EPRO provides a wide range of warranty options for E.Series systems. For a project to be eligible for any warranty option beyond a 1-year material warranty, an EPRO Authorized Applicator must be used and the project must be registered and approved by EPRO prior to the commencement of any product application.

Warranty options available for this system include:

- Material warranty
- E.Series Labor and Material Warranty
- E.Assurance No-Dollar-Limit Warranty

For information relating to EPRO’s E.Assurance warranty program, contact EPRO. All E.Assurance no-dollar-limit labor and material warranties are approved on a project by project basis. E.Assurance warranties are available for deck applications when E.Series systems are used on the below-grade envelope.
